| Office Action Summary | Examiner | Art Unit | | | | | |
| The MAILING DATE of this communication on | Matthew J. Smith | 3672 | | | | | |
| The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply | | | | | | | |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). | | | | | | | |

Art Unit: 3672

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: 38, 39, and 44.

Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Arceneaux (20040099413).

Arceneaux discloses a wellbore cleaning apparatus, comprising: a mandrel (for port 32) having a lower end extending beyond at least one lowermost fluid barrier 10, the lowermost fluid barrier extending toward the wellbore wall; at least one first lateral opening or port 32 through the mandrel, located between the lower end of the mandrel and the lowermost seal and substantially closer to the lowermost seal than to the lower end, the first lateral opening in fluid communication with an inner passage (note flow arrows) through the mandrel to accept fluid and debris as the mandrel is advanced downhole.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arceneaux in view of Belden et al. (5462115).

Arceneaux discloses a wellbore cleaning apparatus, comprising: a mandrel (for port 32) having a lower end extending beyond at least one lowermost fluid barrier 10, the lowermost fluid barrier extending toward the wellbore wall; at least one first lateral

Art Unit: 3672

opening or port 32 through the mandrel, located between the lower end of the mandrel and the lowermost seal and substantially closer to the lowermost seal than to the lower end, the first lateral opening in fluid communication with an inner passage (note flow arrows) through the mandrel to accept fluid and debris as the mandrel is advanced downhole but not a selectively closeable plug.

Belden et al. present a selectively closeable plug 18 in a mandrel passage 8 for a wellbore cleaning device.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to include a selective plug in the Arceneaux wellbore cleaning device, as presented by Belden et al., in order to raise liquids trapped within the casing (Belden et al., col. 1, lines 6-7).

Allowable Subject Matter

Claims 4-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Baker et al. (4776395) show an openable passage 30 to allow fluid flow inside a swab mandrel.

Art Unit: 3672

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew J. Smith whose telephone number is 703-305-5135 or 571-272-7034. The examiner can normally be reached on T-F, 9-4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David J. Bagnell can be reached on 703-308-2151 or 571-272-6999. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
